

ANDY + DEAN • PRODUCT REVIEW

KitchenSmart prototype walkthrough

Every prototype page, in a practical meeting order. v4 reflects the 21 Sep session: the Menu tab replaces Recipes (D-020), Home adapts to how stocked the kitchen is (OQ-D9), and the proposed contrast darkening is applied (A12).

Prototype v4

HOW TO USE THIS DECK

Start with the product story

The screens are sequenced like a real household journey, not by implementation order.

1 · Orient

Home → Inventory → Add Food. Confirm whether the dashboard is the right front door.

2 · Capture

Barcode match, no match, manual entry, and item corrections. Check whether provenance feels understandable.

3 · Decide safety

Allergies, profile visibility, recipe verdicts, and blocked states. These are policy decisions wearing UI clothes.

4 · Close the loop

Menu (tonight and planned) → recipe → cook confirmation → shopping → assistant. Confirm what belongs in MVP versus later.

Meeting rule: react to the decision and user flow, not typography polish. “Would we ship this behavior?” is the useful question.

From “what do I have?” to trustworthy inventory

Stocked kitchen dashboard

S3 · Ready kitchen

WHAT THIS PAGE IS DOING

- Makes expiring food and a strong dinner suggestion immediately useful.
- A skippable “tell us your tastes” card appears only here, never as a sign-up questionnaire.
- Fast routes to inventory, menu, shopping, and the assistant.

Decision prompt · A10 · Home direction / OQ-D9

Once the kitchen is stocked, is the dashboard the right front door?

FLOW · Home → Inventory / Menu / Add / Assistant

Few items, no recommendation yet

S3 · Sparse kitchen

WHAT THIS PAGE IS DOING

- No fake recommendations: the app says what it needs before it can suggest.
- Safety (allergies) is already set at onboarding; tastes wait until they matter.
- Empty state (scan your first item) is in the edge-state page.

Decision prompt · OQ-D9 · Home by kitchen state

With a handful of items and no honest recommendation yet, is “almost there” plus what is on hand the right Home?

FLOW · Onboarding → Home (empty) → first scans → Home (sparse) → Home (ready)

SCREEN 03 • INVENTORY

What is on hand

S4 • Core MVP

WHAT THIS PAGE IS DOING

- Location tabs keep fridge, freezer, and pantry understandable.
- Provenance and "needs confirmation" are visible before acting.

Decision prompt • A1 • MVP scope

Does this list expose enough information to trust quantities and expiry without opening every item?

FLOW • Home → Inventory → Item detail

Choose capture method

S6 · Capture hub

WHAT THIS PAGE IS DOING

- Sets honest expectations instead of pretending every capture method ships now.
- Keeps the primary action focused on getting food into inventory.

Decision prompt · A1 · Scope / A11 · Imagery

For the first release, are barcode scan and manual entry enough? Receipt and camera recognition are marked as later phases.

FLOW · Add → Barcode / Manual / Later capture

SCREEN 05 • BARCODE MATCH

Review catalog facts

S7 • Core MVP

WHAT THIS PAGE IS DOING

- Shows source and GTIN, then asks the user to confirm quantity and location.
- Avoids silently turning third-party catalog data into a known fact.
- Who may promote label data to Known Fact is open (D-017); the prototype shows it as Estimated per field.

Decision prompt • A8 • Label-data trust tier

Should Open Food Facts label data appear as Estimated until the user confirms it?

FLOW • Scan → Review match → Add to inventory

SCREEN 06 • MANUAL ADD

Fallback capture

S9 • Core fallback

WHAT THIS PAGE IS DOING

- Unit type changes the available units.
- A missed barcode can be kept for later enrichment.

Decision prompt • A1 • MVP scope

Is the manual fallback fast enough for products with no barcode match and fresh produce?

FLOW • Add → Manual → Inventory

< Add manually

NAME ✓ Fact

e.g. Trader Joe's frozen dumplings

AMOUNT ✓ Fact

Mass Volume Count

- 1 +

LOCATION ✓ Fact

Fridge Freezer Pantry

Add to inventory

Quantity + ledger

S5 · Core MVP

WHAT THIS PAGE IS DOING

- Quantity edits become append-only corrections, not silent overwrites.
- Used up, discarded, and donated require a reason.

Decision prompt · A9 · Shortfall / correction policy

Does the ledger explanation make a corrected quantity feel trustworthy rather than mysterious?

FLOW · Inventory → Item → Correct / consume

<

Chicken breast

✓ Fact

1.25 lb

on hand · Fridge

Why 1.25 lb? Bought 2.0 lb Wednesday. On Thursday, 2.25 lb was recorded used for Chicken & spinach stir-fry, more than was on hand, so 0.25 lb was added back to correct the count. Bought another 1.25 lb Saturday. $2.0 - 2.25 + 0.25 + 1.25 = 1.25$ lb. What do these badges mean?

Correct this

One tap if this number is wrong. A correction teaches the system. It is never an apology.

Ranked ideas from inventory

S10 • Menu • Tonight (D-020)

WHAT THIS PAGE IS DOING

- Recipes are a subset of Menu, as agreed on 21 Sep.
- Ranking explains expiry usage, purchase gaps, time, and preferences.
- Safety verdicts are separate from the ranking score.

Decision prompt • A1 • MVP scope / D-020

The Menu tab opens on Tonight: ranked ideas from what is in stock. Is this the MVP layer of the Menu page?

FLOW • Home → Menu (Tonight) → Recipe detail

Named menus and day slots

S10b • Menu • Plan ahead (D-020)

WHAT THIS PAGE IS DOING

- Menus: Monday, Weekend, Next 3 days, or custom; slots hold recipes.
- “Add to Shopping” is deterministic gap math tagged with the menu, never generated text.
- Blocked recipes cannot be placed in a slot; unknown ones carry the check-the-package warning.
- Planning never changes inventory; cooking does.

Decision prompt • D-020 • Menu page scope / A1

Named menus with day slots, missing items pushed to Shopping in one tap.
Ship with MVP, or as the fast-follow layer of the same tab?

FLOW • Menu (Plan ahead) → slot → recipe → Add to Shopping

Known match path

S11 • Recipe detail

WHAT THIS PAGE IS DOING

- Shows exact on-hand amounts and the evidence tier.
- Cook action leads to explicit inventory deductions.

Decision prompt • A8 • Trust tier

Is “no known allergen match” clear enough without sounding like a safety guarantee?

FLOW • Menu → Ready recipe → Add to menu / Cook

<

Chicken & spinach stir-fry

25 min • 540 cal • serves 4

Ingredients

Chicken breast

need 2 lb • have 1.25 lb

✓ Fact

short by 0.75 lb

+ list

Spinach

need 5 oz • have 5 oz

✓ Fact

Rice

need ~2 cups • have ~4 cups

≈ Est.

have

No known allergen match • 4 members • label data

Known matches only • not a guarantee this food is safe.

Why this?

Add to menu

Cook this

Deductions + shortfall

S11 • Cook confirm

WHAT THIS PAGE IS DOING

- Every deduction names the lot it comes from, first expiry first.
- The shortfall is written as a flagged correction, never a silent overwrite.
- Proposed policy (OQ-1): record the statement, flag the gap, then prompt to fix inventory.

Decision prompt • A9 • Shortfall policy

When inventory is short, should we record what exists, flag the gap, and still log the meal?

FLOW • Recipe → Cook this → Confirm deductions → Inventory

1.25 lb

Spinach

need 5 oz · have 5 oz

✓ Fact

have

Mushrooms

need 8 oz · have 8 oz

~2 cups

Cancel

Record & flag, log meal

Uncertainty path

S11 • Uncertainty path

WHAT THIS PAGE IS DOING

- Names the missing allergen data instead of hiding uncertainty.
- Unknown is a third state: no red, no green, cooking stays allowed with a warning.
- Separates shopping gaps from allergen unknowns.

Decision prompt • A8 • Label-data trust tier / D-017

When an ingredient has no ingredient statement on file, is "not blocked, not cleared" plus a check-the-package prompt the right answer?

FLOW • Menu → Unknown recipe → Check package → Cook

<
Miso-glazed salmon

30 min · 610 cal · thaw first

⚠ Allergen data unknown for Maya (severe: sesame) · miso has no ingredient statement on file

Not blocked, not cleared. Check the package before cooking.

Allergen stop

S11 • Safety stop

WHAT THIS PAGE IS DOING

- Allergen red is reserved for an actual known match.
- The reason and affected household member are named.

Decision prompt • A3 / A8 • Household safety policy

Should blocked recipes remain visible for transparency, with no cook action?

FLOW • Menu → Blocked detail → No cook or plan action

< Thai peanut noodles

20 min • 480 cal • serves 4

Ingredients

Peanut sauce

need 4 tbsp • have 4 tbsp

✓ Fact

have

Rice noodles

need 8 oz • have 8 oz

✓ Fact

have

Contains peanuts • blocked for Maya

Matched "peanuts" in the ingredient statement (label data).
Blocked recipes are shown for transparency only.

Known matches only • not a guarantee this food is safe.

This recipe cannot be cooked or planned while it is blocked for a household member. There is no cook action and no add-to-menu action for a blocked recipe.

Shared gaps

S13 • Shared utility

WHAT THIS PAGE IS DOING

- Gaps from every menu land in one shared list, each tagged with its menu.
- Every item shows its origin: a menu gap, an AI suggestion (purple, a proposal until kept), or the member who added it. The origin is stored per item, so shopping behaviour can be analysed by source (Andy + Dean, 21 Sep).
- Offline actions queue rather than disappear.

Decision prompt • A1 • MVP scope

Does shared shopping belong in the reduced vertical slice, or can it follow inventory and menus?

FLOW • Menu / Assistant → Shopping

Ask the kitchen

S14 • AI surface

WHAT THIS PAGE IS DOING

- Prompt starters make the feature concrete.
- The assistant should explain and act through deterministic app functions.

Decision prompt • A1 • MVP scope / B5 • LLM cost

What is the one assistant job worth shipping first: meal ideas, expiry help, or list building?

FLOW • Home → Assistant → Recipe / Shopping action

SCREEN 16 • HOUSEHOLD SETUP

Create or join

S1 • New household

WHAT THIS PAGE IS DOING

- Supports create and join without assuming a single-person account.
- This is where owner/member rules first become visible.

Decision prompt • A3 • Household permissions

Who may create, join, invite, and manage a household in the first release?

FLOW • Sign in → Create or join → Allergies

The mockup shows a mobile app interface for household setup. At the top, there's a back arrow and the title 'Welcome'. Below this is a message: 'Sign in to start your kitchen. This mockup skips real authentication.' There are two main buttons: 'Continue with email' (dark brown) and 'Continue with Google' (light brown). Under the heading 'Your household', there are two sections. The first, 'Create a new household', has a text input field with placeholder text 'Household name, for example The Chens' and a dark brown 'Create household' button. The second, 'Join with a code', has a text input field with placeholder text 'Join code, for example CHEN-482' and a light brown 'Join household' button.

SCREEN 17 • ALLERGIES

Safety onboarding

S2 • Safety onboarding

WHAT THIS PAGE IS DOING

- Severity is explicit per allergen.
- Preferences are kept visually separate from safety constraints.

Decision prompt • A2 / A3 / A10 • Market + permissions

Confirm: US nine allergens, owner enters them for all members, and the household can see allergy flags.

FLOW • Household setup → Allergies → Home

< Allergies

Required for every member before recipes can be screened. We can only warn about what you tell us, so an honest "none" is as useful as a real allergy. Preferences below are optional.

MAYA CHEN

Milk Egg Fish Shellfish

Tree nut Peanut Sesame Wheat

Soy

Peanut Standard Severe

Sesame Standard Severe

Add another allergen or ingredient Add

✓ No known allergies for Maya

Preferences Skip preferences

Vegetarian High protein Kid-friendly

Continue

SCREEN 18 • PROFILE

Members + settings

S12 • Household profile

WHAT THIS PAGE IS DOING

- Central place for people, safety profiles, and household settings.
- Name choice must happen before store/domain work.

Decision prompt • A3 / A10 • Privacy + product name

Which member details are household-visible, and is “KitchenSmart” only a placeholder?

FLOW • Avatar → Household profile → Member allergy edit

Trust vocabulary

System explanation

WHAT THIS PAGE IS DOING

- Shape, icon, label, and color all carry meaning.
- Review these colors on a real phone before adopting the proposed contrast fixes.

Decision prompt • A8 / A12 • Trust + contrast

Do Known Fact, Estimated, and AI Interpretation feel distinct and understandable without relying on color alone?

FLOW • Any provenance badge → Legend

Don't approve only the happy path

These states usually reveal more product truth than the polished default screens.

New user / empty home

First-run value before inventory exists

Camera denied

Recovery path to settings or manual entry

No barcode match

Keep code and fall back to manual

Menu · no matches yet

Explain why and offer a useful next move

Menu · all blocked

Transparent but clearly unavailable

Shopping offline

Queue shared changes for sync

CLOSE THE MEETING

Decisions to leave with

MVP shape

Ratify the reduced slice, or name the one or two additions that are truly non-negotiable.

Household safety

Confirm US-first allergens, owner/member rights, visibility, and label-data trust.

Product direction

Menu tab name (Menu). Home by kitchen state. Light-first? Is KitchenSmart just a working name?

Build path

Expo client, Better Auth, stubbed-auth M2 now, and hosting only when shared testing needs it.

Afterward: record the answers in DECISIONS.md. Until then, every highlighted item here is a proposal, not a settled requirement.
